

Drum Heaters

Applications

The 200 litre (44 Gallon) drum is still today the container of choice to hold many solid, liquid and semi-liquid products. To heat these products, an electric drum heater is the safest and most efficient way of heating the contents.

BJC Elements manufactures a range of different drum heaters suitable for many industrial and commercial applications.

Pictured are just a few of the BJC drum heaters available. We are also able to design and build multi drum heater ovens to suit your application.

O.E.M Drum Heater

Engine Water Jacket Heaters

Applications

For many years the BJC water jacket heater element has helped keep Emergency vehicles ready for action by keeping the engine's water system hot. Available ex stock, the elements are rated at 400W 230V.
